

## **A G R E E M E N T**

**between the Telecommunication Administrations of Finland and Estonia  
concerning the use of the frequency bands  
385-390 MHz / 395-399.9 MHz for the Land Mobile Service and Fixed Service  
facilities in the border areas**

**Helsinki 2001**

## **Preamble**

According to Article S6 of the Radio Regulations, the representatives of Telecommunications Administrations of Finland and Estonia (hereinafter referred to as Parties) have concluded this Agreement concerning the use of the frequency band 385-390/395-399.9 MHz with the purpose of avoiding mutual interference to the Fixed Services and Land Mobile Services and optimising the use of the above-stated frequency band on a mutually coordinated basis.

In order to eliminate the possible disagreements the Parties, if necessary, will be guided by the CEPT Recommendation T/R 25-08, while engaging in coordination of the frequency assignments to stations in the Land Mobile Services.

### **1. Use of frequencies in the bands 385-390 MHz / 395-399.9 MHz**

- 1.1. The centre frequencies of the duplex channels in the 385-389.9/395-399.9 MHz frequency band spaced by 25 kHz are listed and allocated as preferential channels between the Parties as shown in Annex 1. The field strength values in section 1.2 refer to 25 kHz receiver bandwidth.

#### **1.2. Preferential frequencies**

- 1.2.1. Estonia may use the frequencies marked with EST without coordination with Finland, if the field strength value at the Finnish coast line does not exceed 40 dB $\mu$ V/m.
- 1.2.2. Finland may use the frequencies marked with EST without coordination with Estonia, if the field strength value at the Estonian coast line, including the islands of Saaremaa and Hiiumaa, does not exceed 10 dB $\mu$ V/m.
- 1.2.3. Estonia may use the frequencies marked with FIN without coordination with Finland, if the field strength value at the Finnish coast line does not exceed 10 dB $\mu$ V/m.
- 1.2.4. Finland may use the frequencies marked with FIN without coordination with Estonia, if the field strength value at the Estonian coast line, including the islands of Saaremaa and Hiiumaa, does not exceed 40 dB $\mu$ V/m.

### **1.3 Simplex channels for common use**

- 1.3.1 The **simplex channels 397-400** (389.9125, 389.9375, 389.9625 and 389.9875 MHz), as referenced in Annex 1, are common simplex channels for Direct Mode Operation (DMO). These channels may be used only in mobile stations in the land mobile service. Both Estonia and Finland may use these channels without co-ordination on a non-protected basis.

### **2. Other provisions**

- 2.1. If the field strength value exceeds the above-stated levels a frequency assignment shall be coordinated with the other Party.
- 2.2. In the case of frequency spacing other than 25 kHz the field strength values referred to 25 kHz bandwidth of preferential and non-preferential channels of each administration shall be maintained.
- 2.3. The above-mentioned field strength values are based on the latest version of the ITU-R Recommendation P.370; i.e. 450 MHz, cold sea, height of receiving antenna 10 m, 10 % of time, 50 % of locations.
- 2.4. In the presence of interference the claims shall be showed in accordance with Appendix S10 of the Radio Regulations. The Parties shall take all possible measures in order to eliminate the interference.

### **3. Revision of the Agreement**

- 3.1. This Agreement can be extended, complemented, revised or cancelled by a mutual decision of both Telecommunication Administrations.
- 3.2. This Agreement can be cancelled by a decision of one Telecommunication Administration subject to a six-month notice to the other Administration.
- 3.3. In the case this Agreement is cancelled coordination shall be made according to the CEPT Recommendation T/R 25-08.

#### 4. Coming into force

- 4.1 This Agreement shall enter into force from the moment of the signing of it by both Telecommunication Administrations.

This Agreement has been drawn up in two identical copies, one for Estonia and one for Finland.

Helsinki 23 March 2001
